Note to the Examiner

I am a 76-year-old handicapped veteran who is clinically blind. This visor is the result of my efforts to improve my own vision and the vision of others. It has been thoroughly checked out by a reconstruction surgeon, a noted ophthalmologist. The Doctor of Ophthalmology persuaded me to perfect this item. There is a great need for this product. I live on a fixed disability income so I didn't have the money to hire an attorney to help me with this but I am following the instructions in a book and will try very hard to do it all right.

I have written a claim as best I can but understand you might be willing to also write one for me if you feel I have missed anything important. If this is true, I would appreciate it if you would do that for me.

Thank you very much.

Title: The Comfort Optics Visor

As a below named inventor, I hereby state that I qualify as an independent inventor as defined in 37 CFR 1.9(c) for purposes of paying reduced fees to the Patent and Trademark Office described in:

- ☒ the specification filed herewith with title as listed above.
☒ the application identified above.
☐ the patent identified above.

I have not assigned, granted, conveyed, or licensed, and am under no obligation under contract or law to assign, grant, convey, or license, any rights in the invention to any person who would not qualify as an independent inventor under 37 CFR 1.9(c) if that person had made the invention, or to any concern which would not qualify as a small business concern under 37 CFR 1.9(d) or a nonprofit organization under 37 CFR 1.9(e).

Each person, concern, or organization to which I have assigned, granted, conveyed, or licensed or am under an obligation under contract or law to assign, grant, convey, or license any rights in the invention is listed below:

- ☒ No such person, concern, or organization exists.
☐ Each such person, concern, or organization is listed below.

Separate statements are required from each named person, concern, or organization having rights to the invention stating their status as small entities. (37 CFR 1.27)

I acknowledge the duty to file, in this application or patent, notification of any change in status resulting in loss of entitlement to small entity status prior to paying, or at the time of paying, the earliest of the issue fee or any maintenance fee due after the date on which status as a small entity is no longer appropriate. Description of Invention

The following describes the drawings of my invention fully.

Figure 1. the top view of the headband, shows an expansion loop (right on top of band). The fastener that allows adjustment and secures the visor to the headband, and the expansion loop. This part is adjustable so it will fit the patient's requirements.

Figure 2. the front view of the headband, shows four attached bands that achieve perfect optical alignment. (fasteners in front).

Figure 3. the side view of the headband, shows a fastener that allows adjustment and secures the visor to the headband, the attached bands and the expansion loop.

Figure 4, the front view of the visor, shows the visor's elongated mounting ports to accommodate either fixed, adjustable mechanical or electronic monoculars. The elongated parts allow for adjustment to the patient's center distance.

Figure 5, the side view of the visor, shows an elongated bracket in the front. This bracket is elongated to allow for proper adjustment alleviation of any cantilever effect from heavy monoculars. It maintains stability.

Figure 6, the front view of the alignment adjuster, shows a fixture that is temporarily attached to the visor, allowing the patient to independently adjust each monocular to achieve the maximum vision the patient can obtain. It is used to rotate the monocular to achieve superimposure using roof-top prismatic monocular. When alignment is achieved, the fixture is removed.

Figure 7, the front view of the alignment clamp, shows a clamp that is attached to the monocular, while being held in place by Figure 6, to maintain alignment. If patients center vision is lost, the peripheral vision can be superimposed over the primary vision.

Figure 8, the top and side views of the beveled adjuster, shows a bevel that converts a view visor into a reading visor. The splines maintain the correct angularity for reading.

This is a utility claim not a design claim.

Everything herein has been reduced to practice.

How the Invention Works

When pressure is applied to the expansion loop, the headband expands. The pressure may be applied by hand or a surgeon's arm or by another person (a caretaker for a disabled person, e.g.). When the pressure is released, the headband contracts and the (2) two bands on either side of the head align the visor optically the same way every time. No further adjustment need be made for perfect optical alignment.

My application for a patent concerns the expansion loop, which is totally new. Headbands and visors have been made for a long time. Many brands already exist and my invention does not effect those already existing patents. I have developed a unique concept for an expansion loop that provides optical alignment every time pressure on it is removed and replaced.

The following claims apply to my invention.

Figure 1. the top view of the headband, shows an expansion loop (right on top of band). The fastener that allows adjustment and secures the visor to the headband, and the expansion loop. This pat is adjustable so it will fit the patient's requirements.

Figure 2. the front view of the headband, shows four attached bands that achieve perfect optical alignment. (fasteners in front).

Figure 3. the side view of the headband, shows a fastener that allows adjustment and secures the visor to the headband, the attached bands and the expansion loop.

Figure 4, the front view of the visor, shows the visor's elongated mounting parts to accommodate either fixed, adjustable mechanical or electronic manoculars. The elongated parts allow for adjustment to the patient's center distance.

Figure 5, the side view of the visor, shows an elongated bracket in the front. This bracket is elongated to allow for proper adjustment alieviation of any cantilever effect from heavy manoculars. It maintains stability.
